Only drugs that are part of the listed Therapeutic Drug Classes are included on the Medicaid Preferred Drug List (PDL).

Therapeutic Drug Classes are reviewed annually at one of four quarterly Pharmacy and Therapeutic Committee meetings.

These meetings are generally held the first Thursday of March, June, September, and December.

Therapeutic Drug Classes on the PDL may be subdivided, for example by pharmacologic class or route of administration.

Divided classes include Acne Agents, Antipsychotics, Ophthalmic Anti-Inflammatories, Glaucoma agents, PAH Agents, Hemophilia Agents, HIV/AIDS Agents, etc.

Any Therapeutic Drugs Classes not listed are not part of the PDL but will continue to be covered for Washington DC Medicaid Fee for service members.

Excluded classes and drugs include:

- Drug Efficacy Study Implementation (DESI) drugs
- Anti-obesity drugs
- Drugs for cosmetic purposes (unless determined to be medically necessary)
- Erectile dysfunction drugs
- Drugs that do not have a signed federal rebate agreement on file with CMS

For Therapeutic Drug Classes with clinical or other criteria, such as quantity limits, the corresponding criteria are listed under the drug class with **hyperlinks** provided for request forms.

Therapeutic Drug Classes reviewed may not include all marketed drugs.

- The following types of drugs are not typically included:
  Inpatient drugs
- Health Care Provider (HCP) administered drugs
  (Also referred to as Physician Administered Drugs (PAD))
- OTCs
- Drugs not participating in Medicaid programs

Although there are exceptions for certain HCP administered drugs and OTCs.

This PDL may be searched in Adobe Acrobat Reader using CTRL-F, and on smartphones using the available search function.

Drugs listed on the PDF:

- Are generally only included under a single therapeutic class even though there may be varying indications
- All lowercase letters = generic product
- Leading capital letter = brand name product

New drugs to market in reviewed Therapeutic Drug Classes will not be listed on the PDL until after they are reviewed.

When new drugs come to market during the year, their default status is typically non-preferred. Exceptions include:

- HIV / AIDs drugs – (Unless there is already an available product with the same active agent(s))
- Opiate Dependence Treatments

A list of drug products whose status was changed with the last quarterly PDL update as amended may be found at the end of the PDL. These include newly added drug products, products whose status has switched, and products removed from the PDL due to either marketing discontinuation with any released stock likely beyond the expiration date or cancelation of participation in Medicaid.

While therapeutic area and drug class names are mainly in alphabetical order and reflect the drugs in the therapeutic area or drug class there are exceptions, e.g. the Central Nervous System area includes peripheral nervous system drugs, and topical steroid drug classes are listed in terms of increasing potency.
